Exercises

Use Visual Studio to create the following form using XAML and C#.
The idea is for you to experiment with the languages and see what you can create.

There are some key things to do when you are making this application.

- You should create a method that calls the `MessageBox.Show()` method and that method should take 3 parameters.

- When calling the method the UI parameters should be passed into the method.

- The method that is called by the event should call the `MessageBox.Show()` and pass in the string values that are received as parameters.

- The idea is to seperate the UI from the Business logic as much as possible.

An example of the form is here:
